Chart 3
Monetary presentation of the balance of payments

(EUR billions; 12-month cumulated data)

Source: ECB.

Notes: "MFI net external assets (enhanced)" incorporates an adjustment to the MFI net external assets (as reported in the consolidated MFI balance sheet items statistics) based on information on MFI long-term liabilities held by non-residents, available in b.o.p. statistics. B.o.p. transactions refer only to transactions of non-MFI residents of the euro area. Financial transactions are shown as liabilities net of assets. "Other" includes *financial derivatives* and statistical discrepancies.

The monetary presentation of the balance of payments (Chart 3) shows that the *net external assets (enhanced)* of euro area MFIs decreased by €70 billion in the 12-month period to July 2021. This decrease was driven by euro area non-MFIs' net outflows in *portfolio investment debt* and *portfolio investment equity*. These developments were partially offset by the *current and capital accounts* surplus and, to a lesser extent, by euro area non-MFIs' net inflows in *other investment*, *direct investment* and *other flows*.

In July 2021 the Eurosystem's stock of *reserve assets* increased to €888.5 billion, up from €869.0 billion in the previous month (Table 3). This increase was mainly driven by positive changes in the price of gold (€19.3 billion) and, to a lesser extent, by positive exchange rate changes (€0.2 billion), which were partly offset by net disposals of assets (€0.3 billion).
