Chart 3
Monetary presentation of the balance of payments

(EUR billions; 12-month cumulated data)

Source: ECB.

Notes: "MFI net external assets (enhanced)" incorporates an adjustment to the MFI net external assets (as reported in the consolidated MFI balance sheet items statistics) based on information on MFI long-term liabilities held by non-residents, available in b.o.p. statistics. B.o.p. transactions refer only to transactions of non-MFI residents of the euro area. Financial transactions are shown as liabilities net of assets. "Other" includes *financial derivatives* and statistical discrepancies.

The monetary presentation of the balance of payments (Chart 3) shows that the *net external assets (enhanced)* of euro area MFIs increased by €16 billion in the 12-month period to April 2021. This increase was driven by the *current and capital accounts* surplus, and the euro area non-MFIs' net inflows in *direct investment* and, to a lesser extent, in *other investment* and *other* flows. These developments were partly offset by euro area non-MFIs' net outflows in *portfolio investment debt* and *portfolio investment equity*.

In April 2021 the Eurosystem's stock of *reserve assets* increased to €852.1 billion, up from €849.5 billion in the previous month (Table 3). This increase was driven by positive changes in the price of gold (€9.2 billion) and, to a lesser extent, by net acquisitions of assets (€0.7 billion), which were partly offset by negative exchange rate changes (€7.7 billion).
