# PRESS RELEASE

4 March 2015

## Euro area bank interest rate statistics: January 2015

- The composite cost-of-borrowing indicator for new loans to corporations<sup>1</sup> remained broadly unchanged at 2.41% in January 2015.
- The composite cost-of-borrowing indicator for new loans to households<sup>1</sup> for house purchase decreased by 11 basis points from the previous month to 2.39% in January. This was the 12<sup>th</sup> decrease in a row since February 2014.
- In the same month, the euro area composite interest rate for new deposits from corporations remained broadly unchanged whereas the one from households increased.

### Bank<sup>1</sup> interest rates on new loans to, and deposits from, euro area corporations and households (percentages per annum)

### Bank interest rates for corporations

While the [composite cost-of-borrowing indicator](#), which combines interest rates on all loans to corporations, remained broadly unchanged, January 2015 saw mixed developments in the cost of new borrowing by corporations both for small loans of up to €250,000 and for loans of over €1 million. For example, the interest rate on [new loans of over €1 million with a floating rate and an initial rate fixation period of up to three months](#) decreased by 9 basis points from the previous month to 1.65%. The rate for new loans of the same size with an [initial rate fixation period of over ten years](#) decreased by 36 basis points to 1.97%. The

<sup>1</sup> In this press release "corporations" refers to non-financial corporations (sector S.11 in the European System of Accounts 2010, or ESA 2010) and "households" to households and non-profit institutions serving households (ESA 2010 sectors S.14 and S.15). "Banks" refers to monetary financial institutions except central banks and money market funds (ESA 2010 sector S.122).

month-on-month decrease was driven by the interest rate effect, which accounted for 32 basis points of the change. In the case of [new loans of up to €250,000 with a floating rate and an initial rate fixation period of up to three months](#), the average rate charged increased by 5 basis points to 3.72%. The month-on-month increase was driven by the interest rate effect.

As regards new deposit agreements, the interest rate on [deposits from corporations with an agreed maturity of up to one year](#) stayed more or less constant at 0.43% in January 2015.

The interest rate on [new loans to sole proprietors and unincorporated partnerships with a floating rate and an initial rate fixation period of up to one year](#) increased by 6 basis points to 2.71%. This increase was driven by the interest rate effect.

### Bank interest rates for households

The [composite cost-of-borrowing indicator](#), which combines interest rates on all loans to households for house purchase, decreased in January 2015. The interest rate on [loans for house purchase with a floating rate and an initial rate fixation period of up to one year](#) decreased by 13 basis points to 2.30%, while the interest rate on [housing loans with an initial rate fixation period of over ten years](#) fell by 27 basis points to 2.42%. In the same period, the interest rate on [new loans to households for consumption with a floating rate and an initial rate fixation period of up to one year](#) rose by 19 basis points to 5.26%. This was driven by the interest rate effect which outweighed the corresponding weights.

Rates agreed on new deposits from households saw mixed developments. The interest rate on [deposits with an agreed maturity of up to one year](#) rose by 6 basis points to 1.04%, while the interest rate on [deposits redeemable at three months' notice](#) remained basically unchanged at 0.84% in January 2015.

	Bank interest rates				New business volumes (EUR billions)		
	Jan.2015	Month-on-month change (basis points)			Jan.2015	Dec.2014	Jan.2014
		Interest rate effect	Weight effect				
<b>Corporations</b>							
<i>Loans of over €1 million with a floating rate and an initial rate fixation period of up to three months</i>	1.65%	-9	-7	-2	120.14	139.48	110.17

\* For this instrument category, the concept of new business is extended to the whole outstanding amounts and therefore it is not comparable with the business volumes of the other categories; households and corporations are merged and allocated to the household sector. Volume data are derived from the ECB's monetary financial institutions balance sheet statistics.

Tables containing further breakdowns of bank interest rate statistics, including the composite cost-of-borrowing indicators for all euro area countries, are available from the ECB's Statistical Data Warehouse at [sdw.ecb.europa.eu/reports.do?node=1000002880](http://sdw.ecb.europa.eu/reports.do?node=1000002880). A subset is visually presented in "Our statistics" at [www.euro-area-statistics.org](http://www.euro-area-statistics.org). The full set of bank interest rate statistics for both the euro area and individual countries can be downloaded from [sdw.ecb.europa.eu/browse.do?node=2018774](http://sdw.ecb.europa.eu/browse.do?node=2018774). More information, including the release calendar, is available under "Bank interest rates" in the statistics section of the ECB's website at [www.ecb.europa.eu/stats/money/interest/interest/html/index.en.html](http://www.ecb.europa.eu/stats/money/interest/interest/html/index.en.html).

#### Notes:

- The composite cost-of-borrowing indicators are described in the article entitled "Assessing the retail bank interest rate pass-through in the euro area at times of financial fragmentation" in the August 2013 issue of the ECB's Monthly Bulletin (see Box 1).
- Interest rates on new business are weighted by the size of the individual agreements. This is done both by the reporting agents and when the national and euro area averages are computed. Thus changes in average euro area interest rates for new business reflect, in addition to changes in interest rates, changes in the weights of individual countries' new business for the instrument categories concerned. The "interest rate effect" and the "weight effect" presented in this press release are derived from the Bennet index, which allows month-on-month developments in euro area aggregate rates resulting from changes in individual country rates (the "interest rate effect") to be disentangled from those caused by changes in the weights of individual countries' contributions (the "weight effect").
- Euro area statistics cover the EU Member States that had adopted the euro at the time to which the data relate. Lithuania is included in the euro area aggregates as of reference period January 2015.
- As of reference period December 2014, the sector classification applied to bank interest rates statistics is based on the European System of Accounts 2010 (ESA 2010). In accordance with the ESA 2010 classification and as opposed to ESA 95, the non-financial corporations sector (S.11) now excludes holding companies not engaged in management and similar captive financial institutions. These institutions are classified in captive financial institutions and money lenders sector (S.127) and are thus out of the scope of bank interest rate statistics.
