Loans to households France May 2016

Strong increase in loans to households

- The annual growth rate of loans to households increases in May 2016 (+ 3.8%, up from + 3.6% in April), due to the combined effect of the rise in credits for consumption (+ 5.9%, up from + 5.2%) and housing loans (+ 3.4%, up from + 3.2%).
- The production of housing loans increases (€16.6 billion, up from €15.5 billion in April 2016), mainly due to the rising of loans renegotiations.
- The housing loans long term and fixed rates regularly has been decreasing since December 2015 (1.98% in May 2016, down from 2.10% in April 2016 and 2.34% in December 2015).

Additional information

Only loans granted to individuals (households excluding sole proprietors and unincorporated partnerships) by resident monetary financial institutions are presented here.

The outstanding growth rates are calculated by correcting the effects of outstanding changes not resulting from economic transactions, particularly the derecognition of loans from the MFI's statistical balance sheet due to their sale and securitization and write-offs/write-downs but not the exchange rate effects.

The weighted average rates and new business volumes are calculated according to the harmonized definitions of the Eurosystem. Published rates are the narrowly defined effective rate (NDER). They correspond to the interest component of the Annual Percentage Rate of Charge (APRC). Renegotiated loans also include mortgage repurchase.
